

## **SCIENCE BEHIND THE EXPERIMENT:**

**Dry seeds are dormant (meaning they do not try to grow).**

**When the seeds have water, the germination process starts. This means the seed coat will break open and the roots and leaves will start to push out.**

## **ADDITIONAL ACTIVITIES:**

**Make up another bag with a seed. Put it in a dark place. What happens?**

**Research what makes plants grow better.**

**Research how seeds are gathered for planting new plants.**
